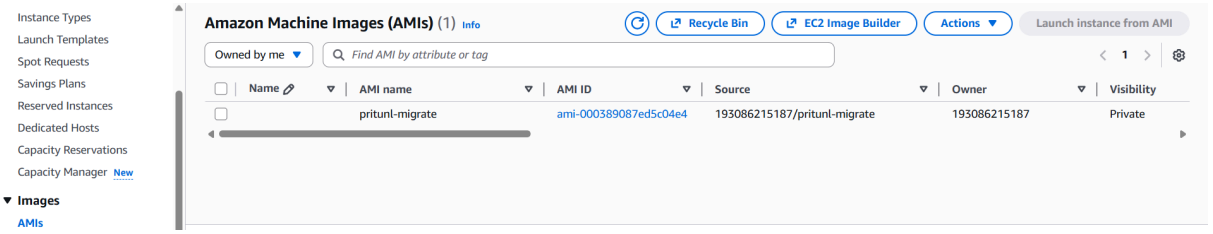
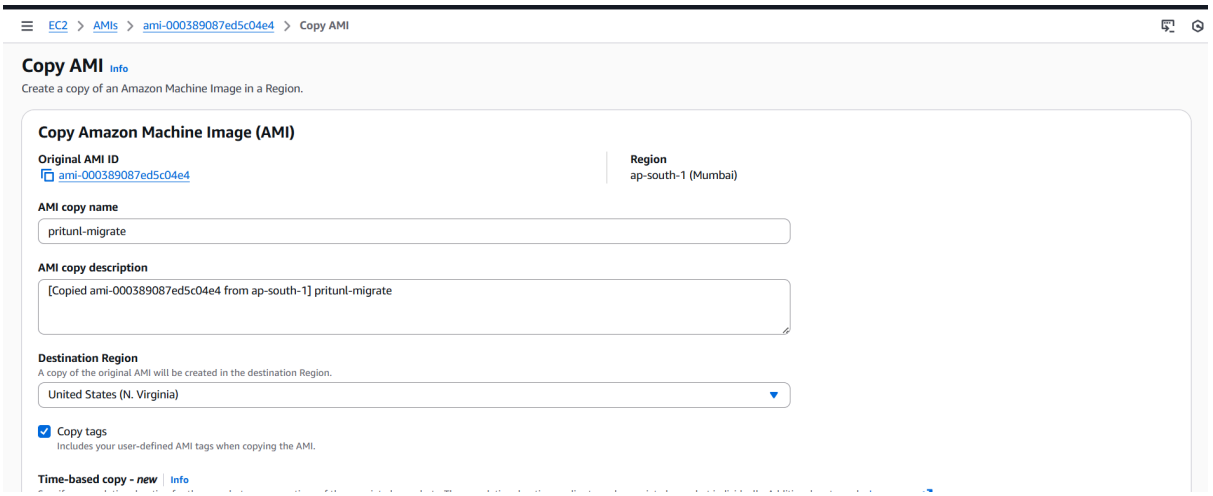
Migrate EC2 instance from one Region to another Region

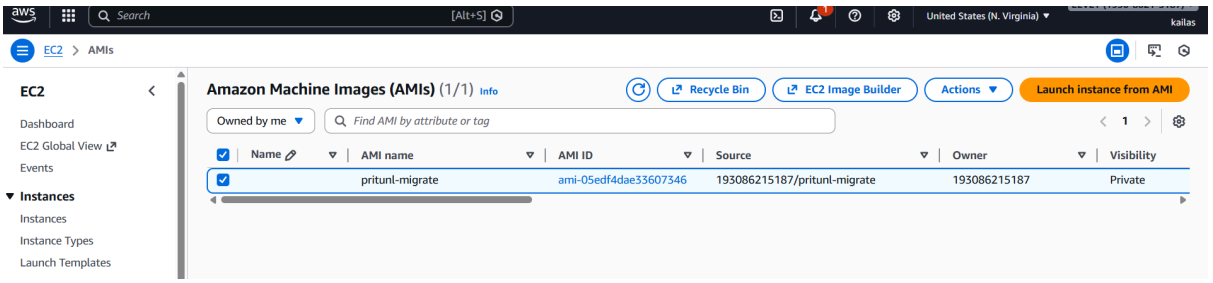
- Selected a pre-existing instance in the ap-south-1 region.
- Navigated to actions and selected Images and Templates.
- Created image of that instance. Waited till the snapshot was created
- Navigated to AMI and selected the created image and copied it.



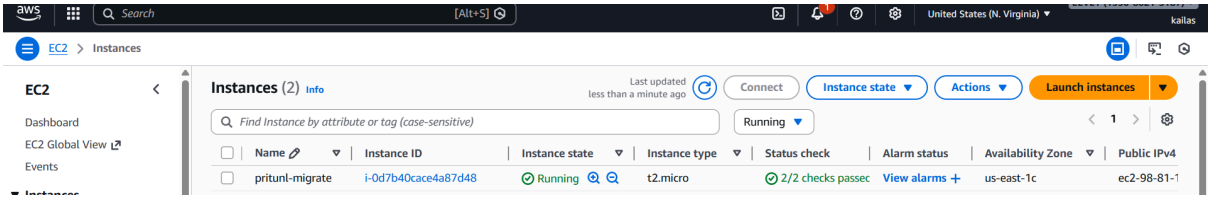
- Set us-east-1 and the destination to copy.



- Selected us-east-1 region and navigated to the AMI section. The migrated image was available.



- Created Instance from the migrated image. Created keypair for login and specified security groups.



- The EC2 instance was successfully created in the us-east region and logged in to the instance.

```
PS C:\Users\kaila\Downloads> ssh -i "cstec2.pem" ubuntu@ec2-98-81-164-176.compute-1.amazonaws.com
Welcome to Ubuntu 22.04.5 LTS (GNU/Linux 6.8.0-1040-aws x86_64)

 * Documentation:  https://help.ubuntu.com
 * Management:     https://landscape.canonical.com
 * Support:        https://ubuntu.com/pro

 System information as of Wed Jan 28 10:50:18 UTC 2026

  System load:  0.0               Processes:             108
  Usage of /:   50.8% of 7.57GB   Users logged in:       1
  Memory usage: 48%               IPv4 address for eth0: 10.0.1.147
  Swap usage:   0%

Expanded Security Maintenance for Applications is not enabled.

9 updates can be applied immediately.
9 of these updates are standard security updates.
To see these additional updates run: apt list --upgradable

Enable ESM Apps to receive additional future security updates.
See https://ubuntu.com/esm or run: sudo pro status

New release '24.04.3 LTS' available.
Run 'do-release-upgrade' to upgrade to it.

Last login: Wed Jan 28 10:50:19 2026 from 103.177.252.213

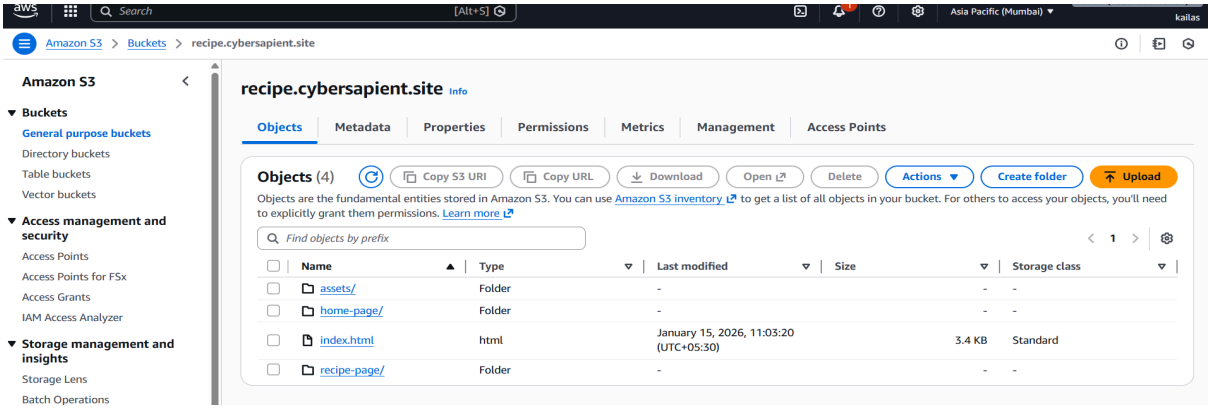
Migrate S3 Bucket from one Region to another Region

- Selected a bucket from ap-south-1 region as the source.



- Created the destination bucket in the us-east-1 region.
- Configured AWS in the local machine using access key and secret access key.
- Copied all the objects from the source bucket to the destination bucket using aws s3 sync.

```
PS C:\Users\kaila\Downloads> aws configure --profile kailas
AWS Access Key ID [****************KDST]: AKIASZ5GV2QJTNYIKDST
AWS Secret Access Key [****************Ouea]: 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
Default region name [ap-south-1]:
Default output format [json]:
PS C:\Users\kaila\Downloads> aws s3 sync s3://recipe.cybersapient.site s3://recipe.migrate.cybersapient.site --source-region ap-south-1 --region us-east-1

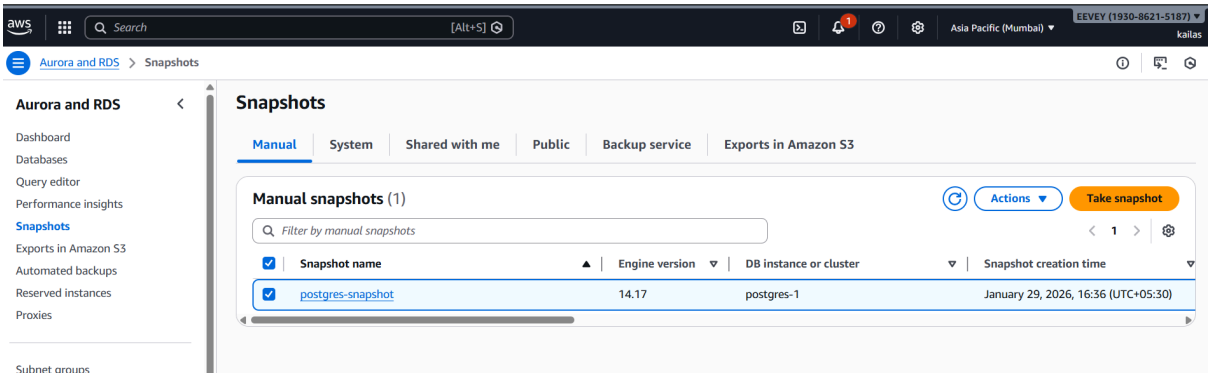
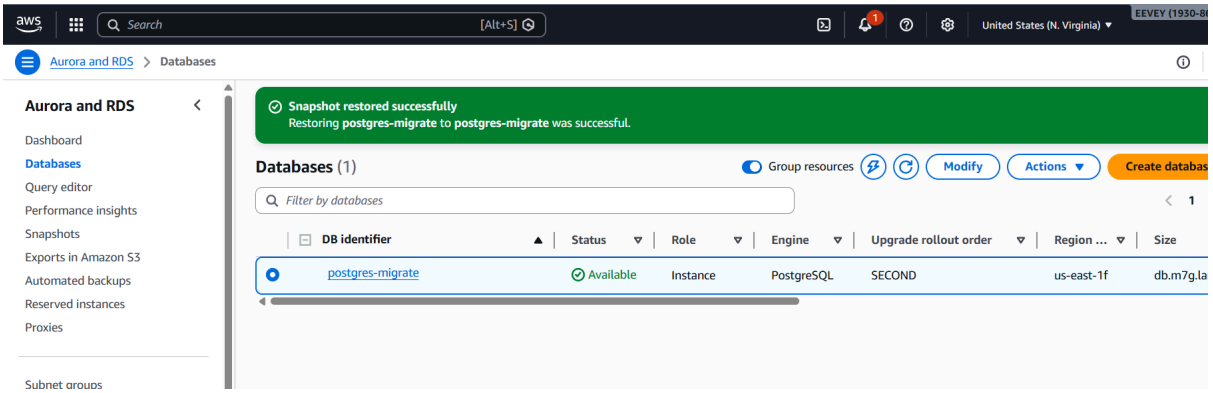
Migrate RDS Instance from one Region to another Region

- Selected a DB instance present in ap-south-1 region.
- Created a snapshot of the DB instance.





- After creating the snapshot, navigated to the snapshot section and copied the snapshot to the desired region (us-east-1).
- Waited for the snapshot to get copied to the destination region.
- Restored snapshot in the destination region.
- DB instance was successfully created in the destination region.
